

Claude

The Complete Learning Guide

From foundations to power user — in the right order.

Why order matters

Learning Claude can feel overwhelming. Projects. Skills. Artifacts. Connectors. Co-Work. Claude Code. Automations. MCPs. Most people don't know where to start — so they either learn things out of order, or give up before they see the real value.

The goal isn't to learn everything at once. The goal is to build a solid foundation first, because Claude works dramatically better when each layer is in place before you add the next one.

The 10-stage learning roadmap

1

Foundations

Understand how Claude thinks, how context works, and its limitations.

2

Prompting

Learn to write clear, structured, and repeatable instructions.

3

Artifacts

Create dashboards, documents, mini apps, and visual outputs.

4

Skills

Build reusable workflows and encapsulate complete processes.

5

Co-Work

Use Claude as a true operational partner for day-to-day work.

6

Connectors

Integrate Gmail, Slack, Drive, Notion and more into your workflow.

7

Automations

Start saving real hours of operational work through automated pipelines.

8

Claude Code

Build systems, tools, automations, and full apps using the CLI.

9

Real-world use cases

Apply everything to marketing, sales, content, analytics, and operations.

10

Power user

Combine context, memory, workflows, agents, and tools into complete systems.

Note for developers: If you already write code, consider running stages 4 and 8 in parallel. Claude Code is a CLI tool designed for developers and there is no reason to wait until stage 8 to explore it. Start it alongside Skills and let both tracks inform each other.

What you can build once all layers are in place

Context + Memory	Claude retains what matters across sessions and adapts to your style.
Workflows + Skills	Reusable processes that execute complex multi-step tasks on demand.
Automations	Pipelines that run without you — saving hours every week.
Connectors	Claude acts directly in your tools: calendar, email, project boards.
Agents	Claude takes initiative, makes decisions, and executes sequences.
Documentation	Systems that keep themselves updated and searchable.

The real power of Claude isn't in doing one task well. It's in connecting context, memory, workflows, automations, tools, and agents into reusable systems that work with you — so you stop saving minutes and start multiplying your output.
